## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-9, drawn to material application system.

Group II, claim(s) 10-16, drawn to material application system.

Group III, claim(s) 17-19, drawn to method for identifying parts of a material application system.

Group IV, claim(s) 21, drawn to method for identifying parts of a container.

Group V, claim(s) 22-23, drawn to method for identifying parts of an assembled product.

Group VI, claim(s) 24, drawn to method for identifying parts of a material application system.

The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: French Patent 2832134 teaches a material application system includes the following structural elements: a plurality of material application system components including at least a material application device for applying a material to a part and a supply of material for the application device, a wireless identification device, said wireless identification device being associated with at least one of said system components, and a sensor for receiving information from said wireless identification device. French Patent 2832134 includes a special technical features of wireless identification device being associated with at least one of the system components/elements, and a sensor for receiving information from the wireless identification device. Therefore, there is no unity of invention when the special technical feature is present in the prior art. Hence, lack of

unity of invention is held by the examiner in accordance with PCT Rule 13. Also see MPEP 1850 – Determination of Unity of Invention.

A telephone call was made to office of Leonard Lewis on 12/23/2009 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brenda A. Lamb whose telephone number is (571) 272-1231. The examiner can normally be reached on Wednesday-Friday with alternate Mondays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nadine Norton can be reached on (571) 272-1465. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
